SKILLS

Programming: Python(pandas,numpy), REST API(fast api, Django)

Databases: SQL (PostgreSQL), Vector Databases (PGVector)

AI & Automation: RAG, AI Automation (n8n), Deep Learning (PyTorch), Langchain, AWS Bedrock, Prompt Engineering, LLM Finetuning, Pinecone, Langraph, Langfuse

Cloud & DevOps: AWS (S3, EC2, Lambda, Textract,Glue, RDS, Athena, Redshift) ,Docker, CI/CD (GitHub Actions),Data Monitoring (Prometheus, Grafana)

PROFESSIONAL EXPERIENCE

AI Automation Engineer, Catalyzu Present | Remote: Cape Town,South Africa

- **Developed a multi-agent WhatsApp learning chatbot** using n8n for a learning management system, delivering automated learning support and guidance to learners.
- Architected scalable **AI backend systems and RAG pipelines**, building FastAPI services, vector databases, and agent workflows using **LangGraph**.
- Implemented **Langfuse-based observability and evaluation**, tracking execution, token usage, latency, and output quality to improve reliability.
- Collaborated with cross-functional teams (product, content, platform) to prioritise fixes, unblock integrations, and deliver AI features.

AI Developer Consultant, ARK May 2025 – September 2025 | Nairobi, Kenya

- Developed a serverless **document processing pipeline** on **AWS** with Python-based Lambda functions and Textract, automating **OCR** and data extraction for **IREC** device registration, which cut manual processing time by **70%** and improved accuracy.
- Built a **document tracking pipeline in Django** to monitor processing stages (uploaded, processing, failed) on AWS, implemented **error handling**, and developed a **notification system** to keep the frontend updated in real time.

Python Developer, Trubai October 2024 – June 2025 | New York, USA

- Built and automated a **Transportation Analyst Agent** in **n8n** that combined NYC transit data, databases, and research documents to provide context-aware insights, helping improve traffic flow, scheduling, and public transit planning.
- Built dynamic **ETL pipelines** using **AWS Glue** to extract, transform, and load structured data, enabling efficient, scalable data processing and analytics.
- Developed a **document processing pipeline** for a RAG system using **AWS Textract** for data extraction and applying **chunking** and **embedding techniques** to preprocess transportation research papers for efficient retrieval.
- **Led a cross-functional team**, managing project planning, task assignments, and delivery timelines to ensure successful and timely project completion.

Python Developer, InterIntel technologies LTD March 2024 – September 2024 | Nairobi, Kenya

- Designed and developed a real-time monitoring and alerting system using **Django REST API** ,**Prometheus** and **Grafana**, reducing issue resolution time by **40%** by tracking and alerting on failed transactions and system anomalies.
- Built an **ETL pipeline** to reduce database size by anonymizing and trimming customer data, ensuring efficient testing while safeguarding sensitive information.
- Developed a real-time data pipeline with **Apache Kafka** to sync customer order data with Business Central, ensuring smooth integration between internal databases and business platforms.

Junior Engineer, Sendy Ltd November 2021 – July 2022 | Nairobi, Kenya

- Enhanced the efficiency of **route optimization** algorithms (Vehicle Routing Problem)by **10%** through research and implementation of new strategies.
- Conducted **unit testing** that improved the performance and scalability of the algorithms.

Software intern, Sendy Ltd August 2021 – November 2021 | Nairobi, Kenya

- Improved existing solutions through the use of **data structures and algorithms** to optimize performance.
- Became familiar with the code base and development practices of the team.

EDUCATION

Bsc Computer Science, Egerton University 2016 – 2021 | Nakuru, Kenya

Equitech Futures, Applied Data Institute October 2022 – December 2022 | Remote

CERTIFICATES

- DEEP LEARNING WITH PYTORCH, Udacity
- DEEP REINFORCEMENT LEARNING,UDACITY
